Time-Saving, *Strong* Concrete

Engineering News-Record Editorial Explains Value to Builders

"The value of this new suggestion," says an editorial in *Engineering News-Record,* February 18, p. 266, in commenting on the methods for producing quick-hardening, strong concrete in *3 days* with standard *Universal* cement, "lies in the possibilities it opens to the thinking concrete man, in the visualization it gives him of what can really be done with concrete if brains are mixed with it."

As pointed out in the *Engineering News-Record* editorial, these methods not only produce strong concrete quickly, but also result in a concrete which is much better and much stronger forever after.

Copy of brief illustrated circular describing the methods for securing this time-saving concrete with standard *Universal* cement, the same quality *Universal* as regularly used, furnished on request to

Universal Portland Cement Co.

You can't recall the water that has gone over the dam!

AND you can't bring back the many dollars lost through past inefficient material handling methods but you can easily stop such wastes by putting an INDUSTRIAL crawler machine to work moving your big loads. Pay rolls have been cut fifty percent, construction jobs finished ahead of schedule, ditches and road work done with unheard of ease and economy—all because of the efficiency of the INDUSTRIAL type DC on the job.

The DC is a crane, shovel and dragline all in one and it gives maximum efficiency in each service. As a crane, — hook and block, clamshell bucket, wood grapple, magnet or pile driving attachments may be applied, all of which greatly augment its serviceability.

Powered either with steam, gasoline, electricity or Diesel engine, these wide tread DC machines will go anywhere under any condition. Let us send you detailed information on this splendid material handling outfit.

Louisiana — State Hy. Comn., Baton Rouge, Mar. 9, reconstructing and repairing bridge over Calcasieu River, on Lake Charles-West Lake Highway, State Project

Every time a community pays for *one* brick pavement it *gets two!*

One side of the brick, properly laid, will give twenty-five to thirty-five years of service, at least. Then, even if the foundation should fail, *the other side* is ready for just as many more years of resistance to traffic.

Scores of far-sighted communities are saving taxes in this way by using vitrified brick, asphalt-filled. Write for facts and figures from official public records proving the salvage value of brick pavements.

No one who voted for Grover Cleveland on his second election for President is less than 55 years old. And yet torch-light processions of that presidential campaign (1892) marched on brick pavements which are still in use today.

Keep this in mind when your community is called upon to decide on paving materials.

Your Safety Factor

The Haiss Precision Strike-off Batch Hopper

meets every requirement of accurate measurement and quick - and - easy operation.

ADVANCE STORAGE OF AGGREGATES IS YOUR FACTOR OF SAFETY

A central batching plant is fine—*if* your deliveries always arrive on time, and *if* your batch trucks have all the luck in the world. But you have a very slim factor of safety. Just a bit of hard luck and your paver will whistle for aggregates—in vain.

You'll lay pavement faster and at lower cost—over the season's work—if you BUILD ADVANCE STOCKPILES as a Safety Factor against forced paver shut-down. Morris C. Soper of Seneca Falls tried both ways and knows from experience that advance storage of his aggregates pays big dividends. It kept his paver busy and boosted his daily paving progress from 800 to 1200 feet—A 50% INCREASE

Now to make a thorough job of organizing for Advance Aggregate Storage you will surely want Haiss Loaders. They are in a class by themselves. Catalog 523 will tell you "how come." Ask for it.

They're Safe

DUFF Trench Braces *Hold*

A FEW turns of the screw handle and the Duff Extensible Steel Brace is placed - to stay - sure and safe.

Ball and socket swivel ends make it adjustable to any angle, the lugs gripping tightly into the sheeting.

No passing vehicles, trench machinery vibration, nor careless laborers can jar it loose or knock it out of place. It cannot slip - eliminating costly cave-ins. It saves time and labor—can be used on job after job, year after year.

Duff Extensible Steel Trench Braces are made with malleable iron fittings and steel screws - no cast iron to break and cause accidents. They are light and strong, and easily adapted to any width trench by simply changing the pipe, which is standard black pipe.

DUFF

—and when you need Jacks

There is a Duff Jack for every lifting requirement. All sizes and capacities from light 1 ton Truck Jacks to heavy 75 ton Ball Bearing Screw Jacks. Exclusive manufacturers of genuine Barrett Jacks, the simplest, sturdiest general utility jacks on the market to-day.

Duff Barrett Automatic Lowering Jacks

5-10-15 tons capacity

Every known improvement suggested by 40 years of jack manufacturing and engineering experience, is incorporated in these models making them of the highest mechanical perfection. They are unexcelled in safety, low repair cost and easy and convenient operation.

Duff Standard Ball Bearing Screw Jacks

15 to 35 tons capacity

Very useful for heavy work of any character including bridge work, car repairing and handling of structural material. Especially suitable for rough outdoor usage. Equipped with foot lift for convenient handling of low loads. Loads lifted with least possible effort on part of operator.

Duff High Speed Ball Bearing Screw Jacks

50 to 75 tons capacity

While designed especially for heavy locomotive work these powerful jacks are adapted for heavy lifting of any character. They are easy to operate because of their ball bearing construction and accurate workmanship.

75 ton model equipped with wheels for convenient moving about.

FACTS AND EVENTS THAT AFFECT COST AND VOLUME

This Week's Contracts—Week Ago—Same Week Last Year

THE money value of contracts reported in the present issue of *Engineering News-Record* is here compared with the figures for corresponding weeks. Minimum costs observed are: $15,000 for water-works and excavations; $25,000 for other public works; $40,000 for industrial and $150,000 for commercial buildings.

Where Markets For Paint Appear Most Promising

A TOTAL of $1,763,279 spent for paint, exclusive of labor, on 367 jobs throughout the country during the first two months of 1926, shows an average value of $4,804 per project.

A comparison of the average value per job for the United States, in this connection, with paint cost per project in the various sections of the country is given in the accompanying illustration.

For buildings of this character, that is, industrial, $40,000 and over, commercial and other buildings, $150,000 and up, the most fertile area for paint sales is evidently in the Middle Atlantic section, with the Mid-west next and the Southern states third.

The Far West is but slightly under the South so far as demand is concerned, while the section between the Rocky Mountains and the Mississippi appears comparatively slow, with New England showing the least activity of the six great geographical divisions of the country, seasonal conditions considered. The figures on the map deal with contracts already awarded.

Substantial gains were noted in industrial and public building projects definitely reported as proposed, in New England and the Middle West, comparing February with the month preceding.

Since Mar. 1, however, there has been consistent weekly increase in building projects proposed, according to *Engineering News-Record* statistics, in the following states:

State	Week of Mar. 4	Mar. 11	Mar. 18	Class of Building
Illinois..	$1,700,000	$3,200,000	$4,225,000	Com'l
Wisconsin	150,000	335,000	645,000	Indus.
New York	.....	18,700,000	25,060,000	Com'l
Calif.....	.....	4,625,000	5,990,000	Com'l
Florida...	.....	3,250,000	5,950,000	Com'l

Over three-quarters of these proposed projects will reach the contract stage between April and June of this year and will require paint at that time.

Value of Paint Required for the Building Contracts

Reported by *Engineering News-Record* in First Two Months of 1926

Industrial Buildings $40,000 and up
Commercial and Other Buildings $150,000 and up

Materials Prices Tending Downward

A downward tendency, evident in wholesale prices since the first of the current year, is also noted in pay-roll totals in the principal manufacturing industries of the nation. Factory employment has increased, indicating a smaller wage rate per hour.

The trend of labor costs in the construction industry has been in the opposite direction from that of factory labor, while employment remained steady.

The gain of 0.5 per cent in March construction cost, over that of the month preceding, was principally due to higher labor rates.

Lumber prices have not fully recovered from the slight drop which occurred during February, compared with the month preceding. Brick tends upward as the spring building season approaches with the usual scarcity forseen in the Northern districts. Steel structurals show little tendency to fluctuate, while prices of other building and construction materials reflect merely the seasonal acceleration in demand.

Weekly Construction Market

CONTRACT letting, Jan. 1 to date, is 24 per cent ahead of the corresponding period last year. Revenue freight loadings, since the first week of the current year, have regularly exceeded 900,000 cars per week, an achievement not attained during the peak year 1925. More than a quarter of this freight represented building and construction materials. Weekly bank debits since Jan. 1, have been consistently heavier than during the same weeks in 1925.

These three vital factors serve to offset, to a degree, the depressing effects of the recent stock market deflation. The liquidation referred to was also reflected in a similar turn in the commodities market, affecting mainly non-ferrous metals, rubber, grains, cotton, coffee and sugar.

Production (all materials included) has pursued during the past two years, a decidedly downward course throughout the first half, followed by a reaction in the latter part of each year. Wholesale prices described a somewhat similar course during 1924 and 1925. This year started off with most of the characteristics of the preceding two years, so far as price and production are concerned; its conduct during the last half will depend largely upon the maintenance of the present volume of demand and at the same time the curbing of speculative excess.

Spring wage agreements in the building trades will probably result in no marked increase in the general cost of construction labor. Building materials prices are below those in effect at this time last year.

Explanation of Prices—Prices are to contractors in carload lots unless other quantities are specified. Increases or decreases from previous quotations are indicated by + or — signs. For steel pipe, the prevailing discount from list price is given; 45-5% means a discount of 45 and 5 per cent.

New York quotations delivered, except sand, gravel and crushed stone, alongside dock; common lump lime, in 280-lb. bbl. net and hydrated lime, f.o.b. cars; tile "on trucks"; linseed oil and cast-iron pipe f.o.b.

Labor—Concrete laborers' rate, 93¾c.; building laborers, 75c.; excavating laborers, 62½c. per hr.

Chicago quotes hydrated lime in 50-lb. bags; common lump lime, per 180-lb. net. Lumber, sand, gravel and stone delivered on job; price of fir is quoted instead of pine.

Minneapolis quotes on fir instead of pine. Brick, sand and hollow tile delivered. Cement on cars. Gravel and crushed stone quoted at pit. We quote on brown lime per 180-lb. net; white is $1.70 for Kelly Island and $1.60 for Sheboygan. Common labor not organized.

THIS limited price list is published weekly for the purpose of giving current prices on the principal construction materials, and of noting important price changes on the less important materials. Moreover, only the chief cities are quoted.

Valuable suggestions on costs of work can be had by noting actual biddings as reported in our Construction News section.

The first issue of each month carries complete quotations for all construction materials and for the important cities. The last complete list will be found in the issue of March 4, the next on April 1.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Pouring LEADITE Joints on line of 12-in. c. i. bell and spigot water main.

Durable Pipe Joints

The wise man builds for the future. Supply lines and distribution systems are usually permanent installations.

Durability and quality should be the first consideration of the product used for making joints in cast iron bell and spigot water mains.

LEADITE is a good product and the leader in its field, because it has gained and retained the recognition, support and patronage of such a great number of water works men for so many years.

LEADITE has been tested and used for over 30 years, under all pressures and conditions, by water works, railroads, mines, contractors and industrial plants thruout the country.

Thousands of miles of pipe have been laid with LEADITE joints, on all sizes from 4 in. to 60 in. in diameter.

LEADITE takes the drudgery out of pipe laying; saves time, money and labor; makes flexible joints; makes joints which will stand vibration under tracks, over and under bridges; makes joints which resist electrolysis; eliminates large bell holes; reduces trench pumping and other work incidental to caulking—LEADITE requires no caulking.

Every water works man abreast of the times knows about LEADITE. LEADITE is an interesting and familiar topic at water works conventions and wherever water works men congregate.

The up-to-date water works man specifies and uses LEADITE.

LEADITE saves at least 75%.

LEADITE is the pioneer self-caulking material for c. i. pipe

Be Sure It Is LEADITE and Accept No Imitations

This Solves a "Rush" Problem

Every Architect, Engineer and Contractor Must Sometimes Face

"For roads, streets, footings," says an editorial in *Engineering News-Record,* February 18, p. 266, in commenting on quick-hardening concrete made in *3 days* with standard *Universal* cement, "the *careful* builder can undoubtedly take advantage of the new methods to accelerate his construction operations."

Rush work often is necessary. In such cases you don't want to wait several weeks for concrete to reach the required strength. You do not need to. In *3 days* you can obtain quick-hardening, *strong* concrete with standard *Universal* cement, the same quality *Universal* you have always used, by applying simple methods that not only give you the required strength in *3 days* but also produce concrete which is much better and much stronger forever after.

Brief description of the simple methods for producing this time-saving concrete with standard *Universal* cement furnished on request to

Universal Portland Cement Co.

Laying a Curve in a 90-in. Independent Reinforced Concrete Sewer, built at Oklahoma City.

The Most Adaptable Pipe for Sewers

This simple diagram shows how easily a curved sewer may be built with ordinary units of INDEPENDENT Concrete Pipe.

NO other material is used so successfully for such a wide range of sewer requirements, or is laid so economically under difficult conditions, as INDEPENDENT Reinforced Concrete Pipe. Made in sizes ranging from 24 in. to 108 in., it meets every demand for sewer service—size, permanence, strength, capacity and economy.

In laying an INDEPENDENT Sewer no special pipe units are used, nor is any special handling equipment necessary. The joint of each pipe is laid *tight* on the inside of the curve, and is *opened* up on the outside of the curve to the desired radius. Forms are then placed inside and outside the pipes and the V-shaped openings filled with concrete. This simple plan gives a true, regular curve to the sewer, and assures smooth, perfect joints—at a minimum cost for labor and material.

In laying sewers in trenches where water, mud, quicksand, cave-ins, etc. are encountered, the speed with which INDEPENDENT Pipe may be laid, joined, and the trench back-filled, means another big saving of time and money.

Contractors who are interested in PROFITABLE sewer construction, and engineers or public officials who want to build PERMANENT sewers on the most ECONOMICAL basis, are invited to send for estimates and full information. *Write, wire or phone.*

NAPOLEON
was a little man

BUT

He Did Big Things!

AND similarly the INDUSTRIAL type DC crawler machine isn't so big but it's *there* just the same. When there was something to be done Napoleon did it—so with the DC when there is work to be done, it does it quickly and economically. The DC waits for nothing. It digs in at once, and the work is done.

The DC is a crane, shovel and dragline and it gives maximum efficiency in each service. It may be powered with steam, gasoline, electricity or fuel oil engine of the Diesel or semi-Diesel type. It is built of the finest materials that money can buy—steel castings, bronze bushings and cut gears. It is built to withstand severe service. Users everywhere cannot say enough in praise for the work of the INDUSTRIAL type DC.

The first cost of an INDUSTRIAL is surprisingly low, the final cost is the lowest. Why not put an INDUSTRIAL to work on your next big job? Increased profits will be assured.

wherever traffic is heavy

Exact specifications for specific uses gladly furnished on request.

Fire-Toughened Floors

IN and around industrial plants wherever heavy materials are moved or fabricated, wherever laden trucks make heavy demands on floors, wherever acid or heat or oil or impact would take costly toll of less-enduring pavements, there is the place which demands vitrified brick.

Its fire-toughened surface does not disintegrate or dust under the heaviest traffic. Its tight texture is impervious to oil, grease and water and is easily cleaned. And it always affords a safe and skid-proof footing.

IT is an old idea, this describing a thing as Royal. Deep-rooted in the minds of the people, the phrase has a well-defined meaning. A thing "fit for a king" or done "to the queen's taste" means the height of perfection.

Above is pictured an Ingersoll-Rand Type 20 Portable Air Compressor working in front of the Royal Palace in Madrid. Sturdy and simple in design, the I-R Portable has long been the standard of the world's most successful contractors.

When you have a job to do quickly and well, use this Portable Air Compressor to furnish the power for your labor-aiding tools. The time and expense will be greatly reduced, and the work will be better done.

These machines are furnished in six sizes, so that your requirements can be exactly met. There is also a complete line of labor-aiding air tools. The correct combination of compressor and tools can be purchased from one manufacturer who assumes complete responsibility for the unit.

Our booklet "One Hundred and One Ways to Save Money," in a newly revised edition, will have a great many surprises for you. This book contains the very latest time and cost data comparing hand and machine methods. In more than 100 ways it shows how to save money by using compressed-air-operated labor-aiding devices. Send us your address so that we can mail you a copy free.

HERCULES ON THE JOB

In Digging Machinery

Men can shovel to the degree that their backs hold out;

Machinery can dig to the degree that its power is steady.

Hercules Power typifies the highest development of the engine that has so universally replaced expensive and inefficient man power.

Hercules takes the machinery to the job—and stays on the job!

HERCULES MOTORS CORPORATION
CANTON, OHIO, U. S. A.

HERCULES

ON THE JOB ENGINES

Hercules Engines and Power Units are built in seven sizes, from 20 H.P. to 100 H.P. for every industrial requirement.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

16-in. c. i. B&S water main laid with LEADITE joints, tested to 195 lbs. water pressure.

Pipe Joint Knowledge

LEADITE is recognized to be the best material for making joints in cast iron bell and spigot water mains by thousands of water works men thruout the world.

Water works men who keep a check on their systems and make water waste surveys know that their pipe lines laid with LEADITE are tight.

Their experience with LEADITE has proven to them that LEADITE joints improve with age, and that the joints do not corrode or rust.

They know that LEADITE has been successfully tested ~~and~~ used for over 30 years.

They know LEADITE will flow around a 60-in. pipe just as easily as it does around a 4-in. pipe; size does not make any difference. They know LEADITE fills every crevice of the joint.

They know LEADITE eliminates the expense and drudgery of caulking.

They know the simplicity, economy and efficiency with which LEADITE can be used.

Give LEADITE a fair trial and convince yourself of its merit and many advantages.

Join the LEADITE users.

The up-to-date water works man specifies and uses LEADITE.

LEADITE saves at least 75%

LEADITE is the pioneer self-caulking Material for c. i. pipe

When *Time* Must be Saved

On many new and repair jobs *time* often is of prime importance.

Just as crack trains cross the country in quick *time,* and powerful motor cars cut *time* records and the U. S. air mail planes almost annihilate *time* to speed up deliveries, so also can *time* be saved to speed up many construction jobs.

In such cases you do not want to wait the time usually required for concrete to gain the desired strength. With the proper materials and methods you do not need to. You can obtain quick-hardening, strong concrete in *3 days* with standard *Universal* cement, the same quality *Universal* as regularly used, by applying the same methods that thousands of laboratory tests and actual construction experience prove will give the desired results.

Detailed information on how to obtain quick-hardening, strong concrete in *3 days* with standard *Universal* cement on jobs "where *time* must be saved" gladly furnished on request to

See that trail?

NO JERKING, grinding, sliding turns with an INDUSTRIAL crawling tractor—when you want to turn, the result is a smooth, easy curve. Here's why:

A patented steering arrangement enables the operator to describe any kind of curve he desires; he doesn't stop one crawler belt — if he did he would skid around the turns; instead he keeps full power on both belts, but slows one down. Powerful friction clutches give him absolute control at all times —and he doesn't have to move from his position in the crane. It means a lot when you're in close quarters.

This steering and propelling mechanism, an exclusive patented feature, has been standard equipment on the INDUSTRIAL crawling tractor crane, shovel and dragline for over a year and a half.

But that's not all—

The Drain of Detours

DON'T think of detours merely as exasperating inconveniences—think of them as *leaks in your community's pocketbook.*

The toll they take of your time, your gasoline, your tires and your car's mechanism is only a small part of their cost. The big burden—and usually a needless one—is the heavy cost of the repairs that are being made.

There are vitrified brick pavements on main traffic routes in many cities and towns which have already given more than a quarter-century of service without requiring a cent of expense for upkeep, repairs or rebuilding.

Paving the Delaware River Bridge Approaches with

GRANITE BLOCK

The Granite Paving Block

is an engineering product —*not a cobblestone*

The improved granite paving block is finished to specifications. These specifications require that the head of the block, the wearing surface, shall have no greater depression than 3/8 in. The improved granite paving block, smooth and accurate, laid with the modern tight (1/2 in.) mastic filled joints, results in a smooth, quiet, dustless pavement of almost eternal durability.

O., Ravenna — Brick paving King and Prospect Sts., from J. L. McCormick,

Ready with a Batch?

To show real progress in laying pavement you must organize to have a batch of aggregates waiting every time the mixer skip comes down. Your profit is in pavement laid, and the more of the one the more of the other.

Van Auken & Robbins of Thendara, N. Y., tell us ". . . we have found the use of Haiss Loaders a very flexible and satisfactory way of handling this (batching) work."

Stockpile your aggregates in advance, batch them with HAISS Loaders and short-haul the batches in light trucks and you'll be able to keep your paver working on a steady 2 minute batch schedule. The reserve of aggregates stock piled on the ground is your SAFETY FACTOR against delayed deliveries from railroad or quarry—or truck delays on long-haul schedule.

Our booklet, "Feeding the Paver" analyzes the aggregate handling problem and develops cost calculations which prove that Advance Storage is no more expensive than Central Batching. What you spend for rehandling you save on trucking. *Let us send you a copy.*

Would you like to check your calculations as to the number of trucks you need? A page of charts in our Bulletin 126 will give you real help. Ask for a copy.

Look Ahead 10 Years

And Ask Yourself These Questions About the Fence You Buy

What will be the condition of the fence framework — the backbone of its strength?

Will it be as strong as it was when the fence was built? Or will there be rust inside or out to weaken the posts? Will the barb-wire arms be all in place and standing out rigid and true? Will the alignment of the fence sway over where something pushed against it?

A good fence will still be in its youth — after 10 years. Specify a fence with steel angle posts — an

AFCO-STEWART STANDARD FACTORY FENCE.

How will the fabric look— after 10 years' weathering?

Will it be there—or gone back to earth in bits of rust? Will it hang taut and rigid, or will it have sagged and bagged under the strains of standing guard?

Not if it is Afco-Stewart Chain Link — *galvanized after weaving.*

Pick the other points in Factory Fence Specifications and question yourself along the same lines—compare and then decide.

Ask for our Factory Fence Specifications and analyze the strength and durability of Afco-Stewart Fence.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

A list of the Country's principal cities, large and small—

Is a list of the satisfied users of LEADITE.

Leadite Users are Leadite Boosters

EAST or West, North or South, take your pick of the cities—and you'll find many of them on the customer list of Leadite—

The country's principal cities, large and small—the country's representative water works engineers, construction companies and water works departments of industrial plants, railroads and mines are strong for Leadite for jointing cast iron water mains—

Are demonstrating what you will be able to do when you use Leadite—

What, for instance?—

You will do away with the need for caulking—or the need for digging out for large bell holes.

You will be able to use Leadite for all sizes of pipe from 4 in. to 60 in. diameter—under all pressures and conditions—

Give Leadite a trial.

Leadite resists electrolysis.

Leadite does not corrode or rust.

Leadite has been successfully tested and used for over 30 years.

Thousands of miles of pipe jointed with Leadite are in service.

The up-to-date water works man specifies and uses LEADITE.

LEADITE saves at least 75%

LEADITE is the pioneer self-caulking material for c. i. pipe

Be Sure It Is LEADITE and Accept No Imitations

Quick Construction For Rush Work

Where early use is demanded of public construction, where an owner insists upon prompt occupancy or where work must be put in service promptly, ordinary concrete will not do.

In such cases it is profitable to use methods by means of which you can obtain strong concrete in *3 days* and better than ordinary concrete forever after with standard *Universal* cement, the same quality *Universal* as regularly used.

Detailed information on the methods for obtaining this time-saving, strong concrete in *3 days* is given in a folder which will be sent on request to

THE LARGEST-SELLING MASON'S CEMENT IN THE WORLD

Evanston Township High School, Evanston, Ill. Perkins, Fellows & Hamilton, Architects; N. P. Severin Co., General Contractors. BRIXMENT mortar used exclusively

BRIXMENT—*your assurance of strength*

PERMANENCE of the wall is a foregone conclusion when BRIXMENT is used for mortar. Because BRIXMENT possesses an invariably high factor of safety and insures uniform strength throughout the entire wall . . . Because the unusual plasticity of BRIXMENT produces a closely-knit, well-keyed joint that makes the wall a solid unit . . . Because BRIXMENT, requiring no lime, prevents the scaling of joints and uncertainty in the mix . . . Because BRIXMENT mortar attains a final strength equal to that of the brick it binds. *And BRIXMENT does not fade mortar colors.* Send for architect's handbook.

KOPPERS BOUGHT A CRANE

AND then what? They bought another — and another — and another. You have heard of the Koppers Company? They build coke ovens that are as good in their field as INDUSTRIALS are in the crane industry.

The Koppers Company now has four INDUSTRIAL crawling tractor cranes — besides a great number of other INDUSTRIAL products such as locomotive cranes, giant coke-pushers, speed reducers and door-lifters.

Koppers bought a crane. Perhaps they were skeptical — but not for long, because — well, why do they buy more INDUSTRIALS? They have found that the two big things about these machines — *Dependability* and *Durability* count the most in the long run. They know that to save vast sums each year in material handling costs by using INDUSTRIAL crawling tractors is just like finding money. Why don't you try it?

Reducing the Cost of Irrigation

This installation should be of considerable interest to cane planters. It shows an Ingersoll-Rand Oil Engine driving a Cameron Centrifugal Pump at the Cameron County Water Improvement, San Benito, Texas.

These direct-connected, oil-engine-driven centrifugal pumping units will deliver water at a fuel and lubricating oil cost of less than two cents per million gallon-feet lift.

Let our engineers help solve your water pumping problems.

AMERICA NEEDS MORE GARAGES IN HER CITIES

RECOGNITION

THE erection of this newest, largest and most modern garage building in New York by such a far-seeing real estate operator as Arthur Brisbane unquestionably confirms the investment value of the modern-idea garage. And Mr. Emery Roth's choice of d'Humy Motoramps again confirms the general appreciation of their superiority in space economy and operating satisfaction.

Architects who have not yet received a copy of our book "Building Garages for Profitable Operation" will want us to send one. Ask for it as Catalog "N."

Cooling Mastery

IN the new TURBOTUBE Radiator, Modine presents a cooling unit that is master of the job it has to do.

Free, unrestricted water circulation, high cooling capacity, and light weight are combined with new limits of strength in the design and construction of TURBOTUBE.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Laying 20-in. c.i. bell and spigot water main across Schuylkill River with LEADITE joints.

Speed— Pipe Laying

Thousands of miles of cast iron water mains have been laid with LEADITE by large cities, towns, villages, railroads, mines, and industrial plants.

These pipe lines are laid under paved streets, under and over bridges, under railroad tracks, across streams, thru open country, in filter galleries—high and low pressures—under all conditions of water works construction.

This is the way some LEADITE users lay pipe:

1710 ft. 6 in. pipe laid in one day.
1665 ft. 6 in. pipe laid in 7½ hrs. with 6 men.
91 lengths 20 in. pipe laid in one day.
15 to 19 lengths 48 in. pipe laid in one day—laid one length in 7 minutes.
3860 ft. 6 in. and 8 in. pipe laid in 9 hrs. with 2 gangs.

You can do this.

The up-to-date water works man specifies and uses LEADITE.

LEADITE saves at least 75%

LEADITE is the pioneer self-caulking Material for c.i. pipe

Strong Concrete in *Three* Days

Often an important section of floor, wall, foundation, walk or pavement must be built and placed in service promptly.

Then you do not like to wait the number of days usually required for concrete to reach the desired strength. You do not have to! By use of the methods recently announced, *three* days are enough. With these methods and standard *Universal* cement—the same quality *Universal* regularly used—you can get concrete in *3 days* as strong as that ordinarily obtained in 28 days, and much stronger at all ages.

Illustrated circular telling how to obtain this time-saving, strong concrete in *3 days* sent upon request to

Universal Portland Cement Co.

"GEE—HAW!"

YOU remember the old days when a loud "GEE" from a teamster led his team in one direction and a "HAW" in the opposite. Well, now-a-days it's even easier than that to steer an INDUSTRIAL crawler.

A patented steering device controlled entirely from the operator's platform through friction clutches makes possible any kind of curve. The operator merely touches a lever and the rest is easy. Full power to both treads is the essential secret of the INDUSTRIAL steering device. However, either belt may be stopped entirely for real sharp turns when required, but for the average turn, full power to both treads gives a smooth, steady curve. Versatility—nothing else but.

The crawler base shown here is one of the several reasons why INDUSTRIALS excel. By means of the patented steering device this base will carry the machine anywhere at the command of the operator. The propelling gears are high up out of the dirt and you will notice that no chains are used, a remarkable advantage in itself. The treads have cast steel shoes of a design that gives a smooth bearing surface to the ground. This and many other features make this car the envy of other crawler machine manufacturers. Follow our advertisements from issue to issue and you will see more clearly why INDUSTRIALS excel.

Other products:—Locomotive cranes 5 to 200 tons capacity, freight cranes, pile drivers, clamshell buckets.

THE annual cost of a pavement is its first cost *plus* interest on its bonds *plus* every later expenditure for upkeep and repairs, *divided* by the number of its useful years.

From the instant it is laid, a pavement is subject to destructive forces. The jolt of heavy trucks tend to crack and pulverize brittle materials. Tire chains gnaw into soft surfaces. Contraction and expansion attempt to throw the riding surface into hummocks or to rend and shatter rigid construction. Freezing and thawing of sub-soil moisture racks any rigid pavement surface. Surface seepage, a milder but ceaseless enemy, accelerates decay of short-lived materials.

The combination of these forces wreck some surfaces in a few years. The hand of man, cutting trenches for underground installations, hastens this deterioration, unless the surfacing material can be lifted and replaced without requiring new material.

Only one pavement, at reasonable first cost, meets every modern condition—*the asphalt-filled vitrified brick pavement.*

VITRIFIED Brick PAVEMENTS OUTLAST THE BONDS

Its fire-hardened surface resists traffic wear indefinitely—scores of brick pavements are well beyond the 30-year mark. The elastic asphalt joint withstands the bending, jolting and heaving actions of heavy loads, temperature changes and subsoil freezing. Cross-trenches are economically cut because the asphalt joint, though a tight water-seal against seepage, keeps each brick a quickly removable unit that comes out and goes back into place with virtually 100% salvage.

To cap every other advantage, should the surface of a brick street or road, due to foundation failures, become uneven after a quarter-century or more of service, the original brick can be relaid and a smooth, renewed pavement secured at a small fraction of the first cost of any other known pavement!

Moral—advocate vitrified brick for pavements in your community.

I would be glad to receive a free copy of book, "Brick Roads Outlast the Bonds," containing facts and figures on paving costs taken from public records.

All-Around Ability

Makes a HAISS Loader Your Best Buy

At Stockpile, Batching Aggregates for Paving Mixer.
For this work, Haiss Loaders are equipped with the Precision Strike-off Measuring Hopper.

Excavating Fill Material for Culvert Building.
The same Loader can be used for covering concrete pavement for curing—and later removing the covering.

Digging and Loading in Gravel Bank.
The broad creeper treads need no planking. The feeding propellers do the digging. One man only—the operator.

Grading Streets for Paving.

When you invest in a Loader it's worth while to buy the HAISS Creeper and have a machine that has more than stockpile loading ability. Its much greater all-around usefulness makes the price difference a small item. You get it back many times over in extra work.

For instance, T. W. Gatch & Son, in Baltimore, have dug roads, gotten out bank gravel, loaded scarified macadam, dug and loaded piles of stone dust, handled crushed stone at quarry, and probably many other jobs — all with their HAISS Creeper Loader. Because it will do so many jobs well, it always has a job. If you are interested ***ask us to send you Catalog 523***—it is full of suggestions.

You can identify a Haiss Loader by the patented feeding propellers.

The slow-speed crowding drive (patented) is an exclusive feature.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Caulking Means EXPENSE---
No Caulking Means PROFIT

Making LEADITE Joints on 24 inch c. i. B & S Force Main

It is needless waste of time, money and labor to caulk cast iron bell and spigot water mains.

Why not turn this expenditure into a profit?

Use Leadite which is melted and poured into the joint.

Leadite forms a water-tight bond by filling every crevice of the joint from the yarn out to face of bell of pipe, without caulking.

Leadite means simplicity, efficiency and economy.

Water works all over the world use Leadite because it makes a good joint which improves with age.

Leadite resists electrolysis.

Leadite facilitates rapid progress of the work generally.

Leadite does not corrode or rust.

Leadite has been successfully tested and used for over 30 years.

Thousands of miles of pipe jointed with Leadite are in service.

The up-to-date water works man specifies and uses LEADITE.

LEADITE saves at least 75%

LEADITE is the pioneer self-caulking material for c. i. pipe

Be Sure It Is LEADITE and Accept No Imitations

INDEPENDENT
Reinforced Concrete Pipe

Made in Sizes to Meet Your Sewer Requirements

All INDEPENDENT Pipe are made of high grade reinforced concrete, in 4-foot or longer lengths, and of diameters suitable for building storm and sanitary sewers of large or medium size.

A wide range of pipe sizes—from 24 inches to 108 inches in diameter—makes is possible for the engineer or contractor to obtain a standard size of pipe that will meet his requirements exactly. This often means a saving in cost of pipe.

Another feature that saves time, money and man-power, is the "INDEPENDENT" system of building pipe either along the line of trench, or at an adjacent central plant and delivering the pipe to the job ready for the contractor to lay. This method is a distinct advantage over other construction, as it produces pipe of uniformly high quality, of accurate dimensions and specified strength. The pipe are manufactured under supervision of our superintendents, permitting local inspection, and using local labor and materials wherever possible.

Contractors are invited to send for quotations on the concrete pipe needed for their prospective sewer jobs. Our prices and service will prove interesting.

Engineers and civic officials are offered the services of our engineering staff in solving any concrete pipe problems, without cost or obligation.

—*large rollers*

WHAT are rollers? They are those round things between the crawler frames. Why should they be large? Here's why:

Large rollers are the most logical for the purpose because they turn more easily than small ones, with less strain on the bearings, making the machine easier to propel. What would a motor truck or a railroad car be with small diameter wheels that make the axle revolve at high speed on the bearings? Not so good.

These large rollers are of the self-cleaning type and they hold the bearings high up out of the dirt, thus adding considerably to the efficiency of the DC.

That's why there are large rollers on the INDUSTRIAL all purpose crawler—just another reason why INDUSTRIALS excel. Watch this space in every issue and see why your next outfit should be an INDUSTRIAL.

Other products: Locomotive cranes, 5 to 200 tons capacity, freight cranes, pile drivers, clamshell buckets.

Laid in 1891–
Relaid, other side up, in 1924–
–who can say when this vitrified brick pavement will finally complete its usefulness?

THE background of the illustration at the top of this page is an actual photograph of a typical section of the surface of the principal business thoroughfare of Sunbury, Pa., before applying the filler. The brick on this street, a main traffic route of the city, was originally laid in 1891, 34 years ago. In 1924 it was taken up and relaid. The perfect condition of the relaid surface shows clearly in the photograph. Could Sunbury—or any other community—have made a better paving investment? Can your community —*right now*—do better than to pave with vitrified brick, the pavement with salvage value built in it?

"Leyner-Ingersoll" Drifters Cut Tunnel Driving Costs

Increased population requires greater water supply. New and old industrial centers need cheaper power. The volume of transportation, both of people and commodities, is increasing daily.

These conditions are resulting in unprecedented activity in the building of tunnels for water supply, hydro-electric power, and railroads. The State of California alone has built over forty miles of hydro-electric tunnel since starting the famous Hetch-Hetchy project in 1916.

"Leyner-Ingersoll" Drifters were used on all the important tunnel jobs of California—exclusively on some of them. They were selected after exhaustive tests for durability, drilling speed, power, and economical use of air.

On the Southern California Edison Company project the "Leyner-Ingersoll" X-70 Drifter has been used exclusively since its introduction in the early part of 1923. Greater progress in driving and appreciable reductions in the cost of maintenance were the reasons for their standardizing on this drill.

For detailed description of the X-70 Drill ask for Bulletin No. 4158.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Jointing Water Mains

Laying 20-in. c. i. water mains with LEADITE joints thru rough and mountainous country.

Whether you are building an entirely new system or making an extension, laying large or small mains, you will save time, money and labor by using LEADITE.

In making a LEADITE joint NO CAULKING is necessary. Just yarn the joint and pour it full of molten LEADITE; it is an easy and quick operation.

LEADITE allows you to lay more pipe per day. This means getting water into the line without delay.

The quicker you get water to the consumer, the sooner the line produces revenue.

LEADITE makes the work easier on the men by eliminating much of the drudgery of pipe laying. You know what this means in the cold of winter and the heat of summer, and in bad trenches.

The varied applicability of LEADITE makes it the ideal material for jointing cast iron B. & S. water mains.

You will use LEADITE sooner or later as its advantages cannot help but appeal to you favorably.

Familiarize yourself with LEADITE now.

LEADITE does not corrode or rust.

Users know LEADITE makes a good joint.

LEADITE joints improve with age.

LEADITE has been successfully tested and used for over 30 years.

Thousands of miles of pipe jointed with LEADITE are in service.

The up-to-date water works man specifies and uses LEADITE.

LEADITE saves at least 75%

LEADITE is the pioneer self-caulking material for c. i. pipe

Be Sure It Is LEADITE and Accept No Imitations

Emergencies in your work often demand rush construction. Then time is vital; time must be saved; time means money.

In such cases you do not want to wait the time usually required for concrete to reach the desired strength. You do not need to.

By using well-authenticated methods and standard *Universal* cement, the same quality *Universal* regularly used, you can obtain strong concrete in *3 days* and much better and much stronger concrete forever after.

You can prepare yourself for these emergencies by writing for the detailed information on how to obtain this time-saving, strong concrete in *3 days* with standard *Universal* cement.

FRICTION CLUTCH CONTROL THROUGHOUT

—*for maximum efficiency*

TO give an operator a material handling machine that requires real physical effort to operate is decreasing the efficiency of his operation. You do not consciously do this, of course, but many times such is the case. When you buy an INDUSTRIAL you are assured of a machine that handles with the least possible physical exertion and your operators will be pleased with your decision.

Ask the operator—he knows that full friction clutch control is the best. He knows that friction clutches are the answer to smooth, easy operation. No INDUSTRIAL operator tires from operating his crane.

Other products: Locomotive cranes, 5 to 200 tons capacity, freight cranes, pile drivers, clamshell buckets.

This is another reason why INDUSTRIALS excel. Keep your eyes on this space—we have a lot to tell you.

TO BE skid-proof and protect heavily burdened draft-horses—to be moisture-proof and not absorb oil, grease or water—to be wear-proof and avoid continuous repairs and frequent replacement—a driveway in industrial service should be of vitrified brick, asphalt-filled.

The fire-toughened surface of vitrified brick resists traffic almost indefinitely. The asphalt filler makes the wearing surface water-tight, flexible and quiet under impact and easy to take up and relay with practically 100% salvage value. And the surface is always skid-proof and non-absorbent.

"Split face" GRANITE makes an everlasting CURBING

This is a curb having the face left rough, as it naturally comes from the quarry. It is inexpensive, no high priced stone-cutters being needed to finish it. Given a depth about 3 times its width, you have a curbing that "lives forever", enhancing the appearance of road or sidewalk.

Granite curbing is easy to handle without special equipment, and its makers can be relied upon for speedy delivery by rail, water or truck from a nearby quarry. This saves thousands of dollars in labor costs for cities and contractors—for once granite curbing is in place all further costs are over.

Write for Booklet, "Granite Street Construction." It covers the curbing question in detail.

HAISS Loaders can dig because

they have the advantage of HAISS patented Feeding Propellers!

PATENTED

Haiss Feeding Propellers, in combination with other features of our machine are covered by Reissue patent No. 15,515, dated January 2, 1923, a reissue of patent No. 1,345,172, dated June 29, 1920.

We have instituted suit against an infringing manufacturer advertising for sale loaders containing the above mentioned features.

Notice is hereby given that we will vigorously prosecute any infringement and the public is warned against buying or using any product infringing our patents.

George Haiss Mfg. Co., Inc.

The powerful, positive, picking and conveying action of the revolving paddles of the Haiss Self-Feeding Device does more than push loose stockpiled material into the buckets. They *dig*: you can use a Haiss Loader for digging sand or gravel from a bank, for excavating soil, for grading (with or without preliminary plowing as necessary). This flexibility of application makes the Haiss Loader more valuable to any man who uses equipment of this kind. He can keep the machine busy all the time.

Back of the simple, sturdy feeding device is the driving power of a big 37-h.p. Waukesha motor—with power, enough to meet any need. And, matching this high power is the strength of materials and design of parts which enables you to put the load on the machine without fear of breakage.

Ask for Catalog 523 and learn more about this heavy duty loader.

FARRELL'S 85

Stephens-Adamson Uses FARRELL'S 85 Where The Wear Comes

CONTINUOUSLY, day in and day out, the buckets of this Stephens-Adamson bucket carrier travel over the tripper.

To withstand the constant wear, Stephens-Adamson builds the tripper side frames of FARRELL'S 85.

But wear resistance is only one of the many desirable qualities of FARRELL'S 85. In strength it exceeds nickel steel. There is no distortion or flowing under repeated blows (a weakness of some alloy steels). Nor does high wear resistance mean an undue sacrifice of ductility and resistance to shock.

Wherever a casting is subject to high strain or excessive wear, FARRELL'S 85 gives longer life at very little increase in cost.

Use FARRELL'S 85 for dipper teeth, bucket lips and everywhere replacements are now frequent.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Section of 9 miles 30-in. and 36-in. pipe laid with LEADITE

LEADITE, like cast-iron pipe, has proven its durability.

LEADITE has been successfully tested and used for over 30 years for jointing all sizes of cast-iron bell and spigot water mains from 4 in. to 60 in. in diameter, under all pressures and conditions encountered in water-works construction.

Thousands of miles of pipe have been laid with LEADITE.

The most prominent water-works engineers, superintendents and contractors specify and use LEADITE on their work, because it is durable, economical and efficient.

LEADITE saves at least 75%.

LEADITE is the pioneer Self-Caulking Material for c.i. Pipe

Be Sure It Is LEADITE and Accept No Imitations

THE LARGEST-SELLING MASON'S CEMENT IN THE WORLD

The Parke, Gates Circle Apartments, Buffalo, N. Y. H. L. Stevens Co., New York City, Architects and Contractors. BRIXMENT mortar used exclusively

BRIXMENT—*for moisture-resistance*

THE moisture-resisting quality of BRIXMENT mortar is just another reason for its uniform strength and endurance. And because of this characteristic, BRIXMENT is regularly specified for under-ground as well as over-ground masonry to prevent seepage and disintegration of joints. The same oily constituent of BRIXMENT mortar enables the mason to strike faster, more accurate joints and to obtain faithfully the desired architectural effects in the bond. No free lime to cause scaling, popping or fading of mortar colors. Grows stronger with age. Send for architects' handbook containing complete data and tests.

Two-Speed Outfit

WHEN handling light loads it is of advantage to be able to speed up operations without racing the engine and this is possible with the INDUSTRIAL crawler machine. One-speed machines either operate too fast for heavy work or too slow for light tasks. Not so with an INDUSTRIAL as the operator may shift into high or low gear at will. This makes it an all-purpose machine of great efficiency.

Similar to the two-speed hoist is the two-speed propelling of an INDUSTRIAL. For steep grades and soft ground the low gear is much more practical. But for level ground and speed, the high gear moves the DC from place to place with almost unbelievable quickness.

This two-speed feature is just another one of the hundred reasons why INDUSTRIALS excel. Keep a lookout for our next advertisement, we have a lot more to tell you.

Other products: Locomotive cranes, 5 to 200 tons capacity, freight cranes, pile drivers, clamshell buckets.

SEWER & CULVERT PIPE JOINT

Nichols Concrete Pipe

Centrifugally Densified

Manufacturing Processes and Equipment Fully Patented

The process of manufacturing Nichols Concrete Pipe for sewers and highway culverts is identical with that used in making Nichols Pressure Pipe, with slight changes in specifications due to different requirements. The superior quality of concrete, the accurate placement and embedment of reinforcing and the smooth, trowelled inner surface combined with a simple, efficient, dependable joint comprise virtues that are important in any pipe intended for sewers.

Nichols Concrete Pipe for sewers and highway culverts are economically made in small or large volume in licensed plants. Write for complete details regarding territory not yet placed under license.

I-R Portable Air Power

CC Paving Breakers operated from $5\frac{1}{2}$ x 5 in. Portable Compressor.

The most work done for the lowest operating cost

Operations are speeded up and the cost lowered when Ingersoll-Rand Portable Compressors and Air Tools are used.

It is easy to move such a plant to the job and put it into service. Crank up the engine, connect up the tools, and you are ready for work. No pipe lines need be laid. Just move the compressor along with the tools. When one job is completed, your plant is ready to go on to the next.

There are six sizes of Ingersoll-Rand Portable Compressors, so that the correct compressor plant can readily be selected. The most efficient combination of portable compressor and pneumatic tools is available from the Ingersoll-Rand line.

AMERICA NEEDS MORE GARAGES IN HER CITIES

Again We Repeat—

d'Humy Motoramps give maximum car storage capacity—compared with elevators, ordinary ramps or any other system of interfloor travel.

Over a period of five years, and with their use in buildings aggregating 7,500,000 square feet of floor area, d'Humy Motoramps have lost their novelty, but none of their superiority as a factor of building for efficiency. We have yet to see a multi-floor building in which these half-length ramps and staggered floor levels will not provide a greater net income than is otherwise possible.

Any multi-floor garage built for an investment must be planned to yield the largest possible return—it will do so with d'Humy Motoramps. Even a speculative garage proposition cannot afford to ignore their value, for the Motoramp garage will rent or sell at a higher figure, on the basis of its greater earning power.

Plan Multi-floor Garages to make money—use d'Humy Motoramps!

In considering the possibilities of the garage business, and discussing it with possible clients, it will be helpful for you to have: "Building Garages for Profitable Operation." A copy will be sent on request. Ask for it as Catalog N.

How Toledo Scales Saved Thousands of Dollars For These Firms

"WE LOST from $15.00 to $25.00 per day through inaccurate weight," says Marine City Motor Castings Company of Marine City, Mich. "It is simple mathematics to figure out how quickly we paid for our new scale and how much money it has earned since."

"Twenty-five Toledo Scales paid for themselves in the first 30 days of operation. Our actual saving on over-weight on about two million packages amounted to over $1,000," says The Foulds Milling Company of Libertyville, Ill., manufacturers of macaroni products.

"We find after checking over shipments since the scales were installed that we have received from the transportation companies here refunds amounting to about $2,500," says W. M. Dutton & Sons Company of Hastings, Nebraska, manufacturers of harness, and wholesalers of hardware and auto supplies.

The long list of those who have bought Toledo Scales includes the most representative corporations in practically all industries. They bought Toledo Scales either to stop a known loss or to remove the loss shown by a survey of their present equipment.

An industrial survey based upon the automatic accuracy of Toledo Scales reveals losses that were not suspected, and removes a costly hazard from every operation involving the measurement of materials. A Toledo Scale man stands ready to help you do this and to present specific recommendations for improvement, based on demonstrable facts. You are in no way obligated by asking for this information. Kindly address Industrial Sales Department, Section C.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Good Pipe Joints

Has it occurred to you why so many water works men are using Leadite for making joints in all sizes of cast iron water mains?

There are many sound reasons.

The most important reason is that experience has proven Leadite joints are good joints and improve with age.

The other reasons relate to saving in the cost of material and labor.

Leadite facilitates rapid completion of the work.

Leadite saves money from every angle of pipe laying.

Anyone can make Leadite joints; Leadite is very easy and simple to handle.

Yarn the joint, pour it full of molten Leadite, and the joint is finished.

If you have never tried Leadite, do not pass up a good thing without investigating it.

Give Leadite a trial.

Leadite resists electrolysis.

Leadite does not corrode or rust.

Leadite has been successfully tested and used for over 30 years.

Thousands of miles of pipe jointed with Leadite are in service.

The up-to-date water works man specifies and uses LEADITE.

Quick-Hardening Concrete

Strong Concrete in 3 Days with Universal Cement

CONCRETE work is usually allowed to stand many days before it is used, or, in order that the builder does not wait for the required length of time for the concrete to reach the desired strength, and it is not necessary for him to wait. Universal cement is a quick-hardening cement, the same quality that has been in use for years, giving strong concrete in 3 days.

Simple Methods Accomplish the Result

For Rush Work

Strong Concrete in *3 Days*

On many of your rush jobs you do not like to wait the weeks usually required for concrete to reach the desired strength. You do not need to.

By using well-authenticated methods and standard *Universal* cement, the same quality *Universal* regularly used, you can obtain *strong* concrete in *3 days* and at the same time get a concrete that is much better and much stronger forever after.

The folder shown above explains the methods for obtaining this *time*-saving, high early strength concrete with standard *Universal* cement. A copy will be sent promptly upon request to

SHOES

THE tractor shoes on the INDUSTRIAL type DC are large and of the close-fitting type. They present a smooth bearing surface to the ground and do not injure pavements—when it is necessary to travel on them.

It is impossible for stones and dirt to become lodged between the shoes because of their design. No obstruction can cause damage to the tractor belt because of the large, wide, close-fitting shoes—a remarkable feature. On soft ground, where other crawlers are likely to stall, these wide treads carry the type DC without difficulty, wherever the operator wants to go.

And that's another reason why INDUSTRIALS excel. Watch this space next issue and you will find another of the many excelling points illustrated.

Other products: Locomotive cranes, 5 to 200 tons capacity, freight cranes, pile drivers, clamshell buckets.

Paved with Bonds!

A street is "paved with bonds" whenever a pavement is worn out before the bonds which paid for that pavement have been retired. And it's a situation that exists in hundreds of places. The unfortunate taxpayers in such communities are saddled with a double burden.

There's an Ohio city, for instance, which has seen one of its streets repaved three times with short-lived materials, while a more important thoroughfare, carrying heavier traffic, is still paved with vitrified brick laid 35 years ago. And the latter has not yet had a cent of repair cost charge against it. ***Which has been the cheaper street for the taxpayers?***

We will gladly send you an ample supply of convincing testimony on paving cost, taken from official public records, the kind of facts and figures which will help you convince your business associates, neighbors and friends of the economy of paving with vitrified brick. Simply let us know that you are interested.

There's plenty of GRANITE near every big city

—for everlasting pavements

The map shows its wide distribution—available by short hauls or quick shipment to every large city in the United States. You're an out-of-the-way community indeed if Granite Blocks, or Granite Curbs, are not quickly and economically deliverable. Use Granite! Pavements of these everlasting blocks literally "live forever"—25 years of service *with no maintenance cost* is no unusual GRANITE record. As ideal for bridges and tunnels as for streets—the Holland Tunnels are paved with Granite Blocks.

Getting Out Gravel for Road Repair

YOU can about double your truck fleet's day's work capacity—make 6 trucks do the work of 12—by putting the cost of 1 extra truck into a HAISS Creeper Loader.

The HAISS machine will put up a five yard load in $2\frac{1}{2}$ minutes—digging right from the bank. The quick get-away with a full load saves truck time that counts up in extra trips per day. On a short 2 mile haul you can get out two loads for every one you have been loading by hand. You get near-steam-shovel ability and loading capacity at half steam shovel cost.

The husky HAISS Creeper Loader with the power of its 37 H.P. Waukesha Motor and the digging ability of its patented Feeding Propellers and Slow Speed Crowding Drive (also an exclusive HAISS feature) will dig and load in a class by itself.

The Supt. of Roads for one of the Indiana Counties remarked to us at the last Road Show that on the mile haul he could have loaded bank gravel fast enough to keep 40 one-yard trucks going—if he could have had that many to use.

Haiss Creeper Loader digging bank gravel from pit. Note that the broad creeper treads do away with the need of planking.

Let us send you Catalog 523 which will show you the machine and tell you what others have done with it. Write for a copy NOW!

BADGER EXPANSION JOINTS

Install them and forget them

Badger expansion joints are life-time insurance against interrupted pipe line service. Only one premium is paid for this protection—the first.

And it's nobody's job to keep them in service. Their one-piece construction of uniform thickness and strength eliminates packing and attention. No maintenance doesn't mean low maintenance. It means just one thing—that Badger Expansion Joints, installed as easily as any pipe line flanged joint, lose nothing in effectiveness by being neglected. It means that Badger Expansion Joints are designed to be installed and then forgotten.

Then think what this means when piping is laid in tunnels. Badger Expansion Joints are leak proof—no shut downs to clear the tunnel of steam to repack or repair—no financial loss from interrupted service—no personal danger.

Badger Expansion Joints insure protection at no upkeep cost. Safety features of design are described in our Bulletin. Write for it today—there's no obligation.

Engineering Service

Badger engineers are designers, manufacturers and installation experts for the following and kindred power plant products:

Spray Cooling Ponds
Cooling Towers

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Pouring LEADITE Joints on line of 12-in. c. i. bell and spigot water main.

Durable Pipe Joints

The wise man builds for the future. Supply lines and distribution systems are usually permanent installations.

Durability and quality should be the first consideration of the product used for making joints in cast iron bell and spigot water mains.

LEADITE is a good product and the leader in its field, because it has gained and retained the recognition, support and patronage of such a great number of water works men for so many years.

LEADITE has been tested and used for over 30 years, under all pressures and conditions, by water works, railroads, mines, contractors and industrial plants thruout the country.

Thousands of miles of pipe have been laid with LEADITE joints, on all sizes from 4 in. to 60 in. in diameter.

LEADITE takes the drudgery out of pipe laying; saves time, money and labor; makes flexible joints; makes joints which will stand vibration under tracks, over and under bridges; makes joints which resist electrolysis; eliminates large bell holes; reduces trench pumping and other work incidental to caulking—LEADITE requires no caulking.

Every water works man abreast of the times knows about LEADITE. LEADITE is an interesting and familiar topic at water works conventions and wherever water works men congregate.

The up-to-date water works man specifies and uses LEADITE.

LEADITE saves at least 75%.

LEADITE is the pioneer self-caulking material for c. i. pipe

When Speed Is Needed Here Is a Way of Getting It

To gain time, people send messages by air mail, special delivery, telegraph and cable. The slight extra cost is fully repaid by the saving in time.

Often in your work, time also is of vital importance and you aim to save it all along the line. Among other things you do not want to wait the weeks usually required for concrete to reach the desired strength. You do not need to.

By using well-authenticated methods and standard *Universal* cement, the same quality *Universal* regularly used, you can secure *strong* concrete in *3 days* and at the same time get a concrete that is much better and much stronger forever after.

Detailed information on the methods for obtaining this *time*-saving, *strong* concrete in *3 days* will be sent promptly on request to

Strength-
to Withstand Unusual Loads

INDEPENDENT Reinforced Concrete Sewer Pipe have ample strength to withstand unusual load conditions—plus a permanency that defies all the ordinary causes of deterioration. This strength and durability are derived from:

1. DESIGN. Wall thickness and steel reinforcement are designed to give sufficient strength to meet every service demand.

2. FORMS. These are of steel, accurately shaped, and constructed to eliminate distortion and leakage while forms are being filled.

3. MATERIALS. Careful selection and constant inspection of all cement, sand, pebbles or crushed rock to insure the use of none but highest grade materials.

4. MIXING and PLACING. All concrete used is batch-mixed to a uniform color and proper consistency, and promptly placed in the forms, being well spaded to assure maximum density and thorough bonding with reinforcing metal.

5. CURING. Forms are not removed until concrete has attained sufficient strength to prevent injury. New pipe are kept wet to assure proper curing. All pipe are thoroughly cured before being used

Before you bid on, or let, your next sewer work, get in touch with us. We can show you some interesting advantages and economies in using INDEPENDENT Concrete Pipe.

All Functions Independent

TO PROPEL, slew, hoist the load and lower the boom at the same time is absolutely necessary on many occasions. What can your operator do when his clutches operate several different functions instead of just one? He has a problem that cannot be solved. His efficiency of operation is lowered considerably each time such a situation arises. There are many combinations of functions that must be executed at once and without independence of functions this is impossible.

Each function on the INDUSTRIAL type DC is controlled by separate friction clutches, making any combination of motions not only possible but very easy. It is essential for effective operation and before purchasing any make of machine, insist upon independence of functions.

This feature illustrates another reason why INDUSTRIALS excel. There are many more—watch.

Other products: Locomotive cranes, 5 to 200 tons capacity, freight cranes, pile drivers, clamshell buckets.

Veteran Pavements Are Brick Pavements

Do you know of any other pavement at a comparable cost which can hope to equal the records already established by these vitrified brick pavements? The figure in the parentheses at right gives the years of service already rendered.

Jacksonville, Fla.	(32)
Joliet, Ill.	(32)
Springfield, Ill.	(37)
Davenport, Iowa	(34)
Winona, Minn.	(34)
Greenville, Miss.	(27)
Meridian, Miss.	(28)
Lincoln, Neb.	(35)
Tonawanda, N. Y.	(35)
Bucyrus, Ohio	(31)
Cleveland, Ohio	(36)
Columbus, Ohio	(38)
Steubenville, Ohio	(38)
Clearfield, Pa.	(35)
Williamsport, Pa.	(33)
Lynchburg, Va.	(34)
New Cumberland, W. Va.	(42)

IN the column at the left are the endurance records of vitrified brick pavements in the service of seventeen widely scattered communities. And remember that the pavements listed *are still in satisfactory use* despite their age.

Compare these lengths of service with the five or ten year performances of so-called "cheaper" pavements and decide for yourself which, on a business basis, represents the better buy.

What is the oldest hard pavement in your vicinity, other than brick? How does it match in length of service rendered with the examples of brick endurance listed at the left?

Put a DIVIDEND PAYER on the job-get a "LEYNER" SHARPENER

Reduce Your Sharpening Costs 50%
Increase Drilling Speed 20 to 30%

A "Leyner" Sharpener should be installed wherever two or more rock drills are being used. Machine made bits are not only better bits—sharper and more perfectly formed—but they are much cheaper to make and they do cut rock much faster.

"Leyner" Sharpeners make mechanically perfect bits and shanks. Accurate gauging permits $\frac{1}{16}$in. variation between the gauges of the bits of succeeding steels. "Leyner" made shanks minimize drill breakage.

"Leyner" No. 50 Sharpener

The "Leyner" No. 50 Sharpener will resharpen medium size steels at a rate of 65 to 120 per hour; or form new bits 25 to 80 per hour.

This sharpener can also be used for heading bolts, sharpening chisels, picks and hundreds of other tools of various shapes and sizes.

These Sharpeners are described in detail in Bulletin 4322

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Used by
City of Buffalo, N. Y. For Over 20 Years

Pipe gallery Buffalo's new filter plant; joints made with Leadite.

Buffalo is proud of its water works system.

It is proud of its new modern filter plant just completed and representing an investment of millions of dollars.

That is why the City of Buffalo wanted the Convention of the American Water Works Association to meet there this year, June 7th to 11th.

They wanted other water works men thruout the country to see what they have accomplished.

Buffalo has laid about 40 miles of c.i. bell and spigot water mains with Leadite.

They have tested and used Leadite for over 20 years.

The up-to-date water works man specifies and uses LEADITE.

LEADITE saves at least 75%.

LEADITE is the pioneer self-caulking material for c. i. pipe

Be Sure It Is LEADITE and Accept No Imitations

When Your Rush Work Demands High Early Strength Concrete

You want to rush a job to completion. Among other things you do not want to wait the weeks usually required for concrete to gain the desired strength. You do not need to.

By using well-authenticated methods and standard *Universal* cement, the same quality *Universal* regularly used, you can obtain *strong* concrete in *3 days* and at the same time get a concrete that is much better and much stronger forever after.

The chart tells the story. In *3 days*, concrete made this new way, with standard *Universal* cement, has a strength equal to ordinary 28-day concrete. In addition, its 28-day strength is double the 28-day strength ordinarily obtained and it is much better and much stronger concrete forever after.

Detailed information on the methods for obtaining this time-saving, high early strength concrete will be furnished promptly on request to

LUBRICATION—*a tremendous trifle!*

TO make the task of lubrication easy, quick, positive and clean, the INDUSTRIAL WORKS has installed the Alemite-Zerk high pressure lubricating system on their crawling tractor crane, shovel and dragline. This system has solved the problem of neglected and insufficiently lubricated bearings.

It is based upon scientific facts that in order to force lubricant to all parts of a bearing properly, a high pressure is necessary. The INDUSTRIAL Alemite-Zerk system consists of compressors with which it is possible to develop pressure from 500 to 5000 pounds to the square inch with ease.

The fittings are made of steel, thoroughly rust-proofed, and especially hardened to prevent injury if accidentally struck by tools at times of repair. These small ball-check valve fittings take the place of the conventional grease or oil cups.

Because this is a system that lubricates thoroughly, positively and quickly, it provides smooth operation and lessened wear. This in turn brings about increased production, savings in wear and repairs and reduction of breakdowns—another reason why INDUSTRIALS excel.

Other products: Locomotive cranes 5 to 200 tons capacity, freight cranes, pile drivers, clamshell buckets.

PLUS UPKEEP

THE cost of any hard-surfaced road is the sum of the first cost and interest on the bonds, *PLUS the upkeep.* If you can dodge the need for continuous upkeep, road costs become insignificant.

There are plenty of roads in various parts of the United States which have given 20, 25, 30 and 35 years of service and have not required the attention of a road gang even an average of once a year. Continuous maintenance is unknown to them. These roads are *surfaced with vitrified brick.*

These brick roads are slightly higher in "first cost" than "cheaper" substitutes but they have since saved that difference ten or fifteen times over in freedom from repairs.

To prove the truth of these statements we would like to send you free some actual figures on paving costs and maintenance taken from public records. Write for a complete presentation of the economy of vitrified brick pavements—*the pavements that outlast the bonds.*

On the Delaware River Bridge Approaches

Granite Paving Block

Granite Paving Block, jointed and surfaced with asphalt, means an *everlasting durable* and *quiet* pavement. Furthermore, by using SHALLOW blocks the dead load may be greatly reduced, and worn-out wood blocks, or asphalt, or brick, may be replaced with granite blocks on the old concrete base, rapidly and cheaply. These are among the many reasons why Granite Blocks are chosen for structures like the Delaware River Bridge (illustated).

HAISS Loaders can dig because

they have the advantage of HAISS patented Feeding Propellers!

The Powerful, positive picking and conveying action of the revolving paddles of the Haiss Self-Feeding Device does more than push loose stockpiled material into the buckets. They *dig*: you can use a Haiss Loader for digging sand or gravel from a bank, for excavating soil, for grading (with or without preliminary plowing as necessary). This flexibility of application makes the Haiss Loader more valuable to any man who uses equipment of this kind. He can keep the machine busy all the time.

Back of the simple, sturdy feeding device is the driving power of a big 37-hp. Waukesha motor—with power enough to meet any need. And, matching this high power is the strength of materials and design of parts which enables you to put the load on the machine without fear of breakage.

Ask for Catalog 523 and learn more about this heavy duty loader.

Nichols Concrete Pipe

Centrifugally Densified

Manufacturing Processes and Equipment Fully Patented

Concrete so dense that the maximum absorption is less than 4 per cent—that's what a Nichols Concrete Pipe for a pressure line is made of.

Aggregates uniformly distributed through the structure of the pipe wall, reinforcement of any desired design accurately placed and completely embedded. Pipe interior burnished to a virtual glaze.

We are prepared to execute pressure pipe contracts anywhere. Write for complete set of Nichols Concrete Pressure Pipe Specifications.

Power for lifting heavy loads

This National Hoist, which handles four thousand pounds at two hundred feet per minute, must perform consistently in severe and continuous service. A Buda engine furnishes the necessary dependable power.

The National Hoisting Engine Company, Harrison, New Jersey, is one of nine leading makers of hoists who have selected Buda engines as standard equipment.

This dominance in the hoist field is illustrative of Buda's leadership in the industrial field. Buda engines are standard for over thirty different power applications, which include the following:

Arc Welding Sets	Cranes	Locomotives	Rail Cars
Bridges	Ditchers	Logging Machines	Shovels
Compressors	Generating Sets	Mining Machinery	Stone Crushers
Concrete Mixers	Hoists	Oil Pumping Rigs	Turn Tables
Conveyors	Loaders	Pumps	Well Drills

Buda industrial engines are built in seven sizes, ranging from 20 to 87 **Horse Power.** Write for specifications.

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Used by
City of Buffalo, N. Y. For Over 20 Years

Pipe gallery Buffalo's new filter plant; joints made with Leadite.

Buffalo is proud of its water works system.

It is proud of its new modern filter plant just completed and representing an investment of millions of dollars.

That is why the City of Buffalo wanted the Convention of the American Water Works Association to meet there this year, June 7th to 11th.

They wanted other water works men thruout the country to see what they have accomplished.

Buffalo has laid about 40 miles of c.i. bell and spigot water mains with Leadite.

They have tested and used Leadite for over 20 years.

The up-to-date water works man specifies and uses LEADITE.

LEADITE saves at least 75%.

LEADITE is the pioneer self-caulking material for c. i. pipe

Saving Construction Time

The Mayflower crossed the ocean in 96 days. Today the Leviathan makes the trip in less than a week.

In construction work as in travel, saving *time* often is important. Frequently, work must be rushed to completion in the quickest possible time.

On such jobs, you want to speed up work all along the line. You do not want to wait the weeks usually required for concrete to gain the desired strength. You do not need to.

By using what an editorial in *Engineering News-Record* calls "well-authenticated" methods and standard *Universal* cement—the same quality *Universal* regularly used—you can secure *strong* concrete in *3 days* and at the same time get concrete that is much better and much stronger forever after than concrete as ordinarily placed.

Copies of the *Engineering News-Record* editorial on "High Early Strength Concrete" together with detailed information on methods of obtaining this *time*-saving, *strong* concrete in *3 days* furnished promptly on request to

THE LARGEST-SELLING MASON'S CEMENT IN THE WORLD

Hebrew Union College Dormitory, Cincinnati, Ohio. A. L. Fecheimer, Architect; Max Penker & Sons, Contractors. BRIXMENT mortar used exclusively.

For mortar of invariable strength

IT is an accepted fact that retempering ordinary mortar impairs its strength by interrupting the chemical reactions involved in setting. The slower-setting quality of BRIXMENT mortar, however, permits retempering without affecting its final strength which equals that of the brick it binds. By the use of BRIXMENT mortar a maximum and invariable strength is thus assured throughout the entire wall and the work may proceed as fast as the architect wishes. No lime to cause scaling and popping; no slaking to waste time. A comprehensive handbook for architects (made to fit your file) will be sent on request.

LUBRICATION—*a tremendous trifle!*

TO make the task of lubrication easy, quick, positive and clean, the INDUSTRIAL WORKS has installed the Alemite-Zerk high pressure lubricating system on their crawling tractor crane, shovel and dragline. This system has solved the problem of neglected and insufficiently lubricated bearings.

It is based upon scientific facts that in order to force lubricant to all parts of a bearing properly, a high pressure is necessary. The INDUSTRIAL Alemite-Zerk system consists of compressors with which it is possible to develop pressure from 500 to 5000 pounds to the square inch with ease.

The fittings are made of steel, thoroughly rust-proofed, and especially hardened to prevent injury if accidentally struck by tools at times of repair. These small ball-check valve fittings take the place of the conventional grease or oil cups.

Because this is a system that lubricates thoroughly, positively and quickly, it provides smooth operation and lessened wear. This in turn brings about increased production, savings in wear and repairs and reduction of breakdowns—another reason why INDUSTRIALS excel.

Other products: Locomotive cranes 5 to 200 tons capacity, freight cranes, pile drivers, clamshell buckets.

Center—Electric driven portable compressor supplies air for tie tampers or paving breakers.

Bottom—Two CC-Paving Breakers cutting out pavement along track.

Increase your Profits with Air Power

A high rate of speed can be maintained on track jobs when compressed air tools aid hand labor. Full power is available all day long.

Portable air compressors, pneumatic tie tampers, and paving breakers make possible a surprising reduction in the cost of track work. Pneumatic tie tampers enable four men to tamp more track per day, and do a better job, than ten to twelve men using hand picks and bars.

With CC Paving Breakers you can remove pavement or concrete foundations in a small fraction of the time required by hand methods. Other air tools, such as grinders, rail drills, spike drivers, riveters, etc., further increase the savings.

An Investigation of Ingersoll-Rand machines will show you how you can increase your profits by reducing the labor item. Ask for full information on all the labor-aiding uses of an Ingersoll-Rand Portable air compressor outfit.

AMERICA NEEDS MORE GARAGES IN HER CITIES

The EXTRA 10 Cars

The more cars for which you can plan storage space, the more profit will accrue to the building's owner. Which, in a multi-floor garage, immediately introduces the relative space economy of ramps or elevators.

The extra cars which can be stored on each floor of a d'Humy Motoramp garage represent thousands of dollars annually in extra operating profit. That is the value you add to the owner's investment, by incorporating the patented combination of staggered floor levels and half-length ramps in your building plans.

And even if you discount the extra car storage possibility, a d'Humy Motoramp building is still the only profitable type of multi-floor garage structure for these modern days.

That profitable extra storage capacity can be developed for practically any multi-floor building (on a plot 50x100 ft. or larger) is a fact which we are ready to prove to your satisfaction—at any time. Let us do for you what we are constantly doing for hundreds of others—make miniature sketch plans for the building(s) you have in prospect. This service is rendered without cost* or obligation to you as architect.

**The cost of our engineering service is included in the license fee charged for the use of our design—a charge made to the owner and payable only if and as the building goes ahead.*

TRADE **"LEADITE"** MARK

Registered U. S. Pat. Office

Used by
City of Buffalo, N. Y. For Over 20 Years

Pipe gallery Buffalo's new filter plant; joints made with Leadite.

Buffalo is proud of its water works system.

It is proud of its new modern filter plant just completed and representing an investment of millions of dollars.

That is why the City of Buffalo wanted the Convention of the American Water Works Association to meet there this year, June 7th to 11th.

They wanted other water works men thruout the country to see what they have accomplished.

Buffalo has laid about 40 miles of c.i. bell and spigot water mains with Leadite.

They have tested and used Leadite for over 20 years.

The up-to-date water works man specifies and uses LEADITE.

LEADITE saves at least 75%.

LEADITE is the pioneer self-caulking material for c. i. pipe

Be Sure It Is LEADITE and Accept No Imitations

When Time Is Money

When *time* means money in construction, delays are costly. Each day saved in concrete work means a corresponding saving in cash.

On such rush jobs, you do not want to wait the weeks usually required for concrete to gain the desired strength. You do not need to.

By using what an editorial in *Engineering News-Record* calls "well-authenticated" methods and standard *Universal* cement, the same quality *Universal* regularly used, you can secure *strong* concrete in *3 days* and at the same time get a concrete that is much better and much stronger forever after than concrete as ordinarily placed.

Copies of the *Engineering News-Record* editorial on "High Early Strength Concrete," together with detailed information on the methods for obtaining this *time*-saving, *strong* concrete in *3 days*, with standard *Universal* cement, on all jobs where *time* means money, will be sent promptly upon request. Simply send the coupon below.

ROTATING BEDPLATE

THE entire upper machinery of an INDUSTRIAL crawling tractor rests on a single, massive, cast steel rotating bedplate strongly reinforced with ribs. This one-piece base is a guarantee of satisfactory operation because it retains all of the machinery in perfect alignment under all conditions, thus preventing bent shafts, undue wear on gears, and sticking clutches. A heavy structural steel frame extension on the bedplate gives ample floor area.

The revolving bedplate turns on four bronze-bushed steel rollers, mounted on the steel bedplate and running free on stationary shafts. These rollers are accurately turned to proper conical shape to avoid any slipping as the crane revolves. They bear on a combined roller path and external slewing rack and may be quickly and directly removed without jacking up the revolving frame. Any play between the rotating bedplate and the roller path is conveniently adjusted through the center pin nut.

The upper machinery frames are bolted to, and supported directly and entirely by this massive steel bedplate, forming the most rigid and reliable construction possible—another reason why INDUSTRIALS excel.

For the whole story of the INDUSTRIAL *crawling tractor crane, shovel and dragline, write for Book 120-A.*

FORTUNATE COMMUNITIES

WHEN your father or your grandfather voted brick pavements for his community, he quite probably didn't realize that you, in 1925, would still be using them, and profiting by them in savings in taxes. Later, when he was tempted by a "new-fangled" pavement, it was because he thought it would be "just as good." The repairing and the repaving going on around you now, which you are paying for, is the proof that he was mistaken. The old, original, reliable, dependable brick has yet to be matched by anything of later development.

When your neighbors, business associates and friends today are tempted to approve the use of something other than brick, simply ask them which pavements in your neighborhood have given twenty years or more of service—and which types of comparable age have required the least patching and repairing.

Veteran pavements are *brick* pavements. Below are listed just a few of the communities, picked at random, which are profiting by the use today of brick pavements laid more than a quarter-century ago. The figure in parentheses after each name is age in years of the brick pavement.

A Nichols 36" sewer pipe 10' long, 2½" wall thickness, 3½ lbs. reinforcement per lin. foot. Total load to first full length outside crack, 42,000 lbs.

Nichols Concrete Pipe

Centrifugally Densified

Manufacturing Processes and Equipment Fully Patented

Nichols Pipe easily exceed standard strength requirements for pipe designed for pressure lines and for sewers.

They are spun in a machine that has many important advantages which contribute to the quality of the product and its economical manufacture.

Each pipe is cast in a one-piece mold, which cuts handling costs.

The screw feed assures even distribution of aggregate and builds up a pipe wall of uniform density and strength.

The patented burnisher removes excess water and deleterious material from the pipe interior while densifying and gives it a virtual glaze.

Portable plants are available, making it possible to manufacture the pipe near or at the job. Our system of bulkhead curing insures a product of uniform quality.

We are prepared to execute pressure pipe and railway culvert pipe contracts and to equip and license plants for the manufacture of sewer and highway culvert pipe.

We shall be glad to discuss the pipe business with responsible individuals and corporations.

Ready with a Batch?

To show real progress in laying pavement you must organize to have a batch of aggregates waiting every time the mixer skip comes down. Your profit is in pavement laid, and the more of the one the more of the other.

The New Batch Hopper is an important Haiss Loader Improvement

In speed of strike-off, discharge and refill the 1926 Haiss Precision Hopper is in a class by itself. And in the convenience and ease of its operation, and the micrometer accuracy of its setting it leaves nothing to be desired. *Ask for a descriptive folder.*

Stockpile your aggregates in advance, batch them with HAISS Loaders and short-haul the batches in light trucks and you'll be able to keep your paver working on a steady 2 minute batch schedule. The reserve of aggregates stock piled on the ground is your SAFETY FACTOR against delayed deliveries from railroad or quarry—or truck delays on long-haul schedule.

Our booklet, "Feeding the Paver" analyzes the aggregate handling problem and develops cost calculations which prove that Advance Storage is no more expensive than Central Batching. What you spend for rehandling you save on trucking. *Let us send you a copy.*

Would you like to check your calculations as to the number of trucks you need? A page of charts in our Bulletin 126 will give you real help. Ask for a copy.

Aluminum Paint Protects and Beautifies this Factory Interior

Interior Weston Electrical Instrument Corporation, Newark, N. J.

AMONG the first important manufacturing concerns in this country to realize—and profit by—the reflective and protective value of Aluminum Paint was the Weston Electrical Instrument Corporation.

The use of Aluminum Paint on the factory interior (shown above) is but one more evidence of their forward looking policy.

Here are the reasons why the Weston Corporation are enthusiastic about Aluminum Paint.

It is extra durable.

Its cool, silvery gray color gives their factory interiors a crisp, clean appearance.

The lustrous color of Aluminum Paint lasts—and dust and dirt may be washed from its coat-of-metal coverage.

They retouch their factory interior at those points where constant contact has finally soiled the surface, without leaving any defacing line between the new and the old Aluminum Paint jobs.

One coat coverage is sufficient for interior painting. One coat will hide any color—even black.

And Aluminum Paint reflects a soft, well diffused working light over their factory that is kind to operatives' eyes.

The many wonderful qualities inherent in Aluminum Paint are due to a unique surface tension principle, "Leafing".

The value of this principle to industry is interestingly and instructively told in the Paint Booklet—"Aluminum Paint—A Step Ahead in Industrial Painting."
